

# Readme

## First time opening

1. Unzip "Browser ChooserX.zip".
2. Select "Browser ChooserX.app". Press the Control key, then click in "Browser ChooserX.app" and choose "Open" from the shortcut menu.
3. Click Open.

An window asking if you want to change your default browser should appear.

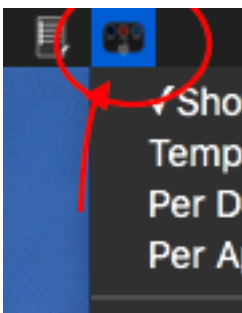

If it does not appear, open System Preferences>General>Default web browser and choose Browser ChooserX (1.0.6).

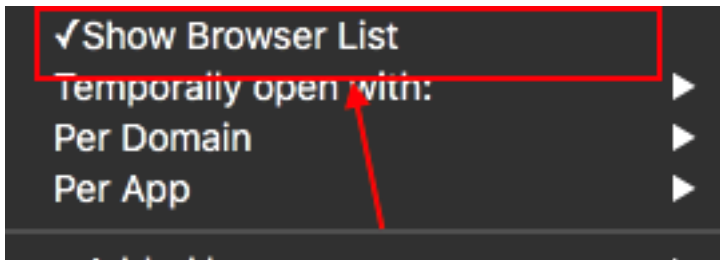

Try to click in a link outside a browser. If it does not work, please send an email to [support@bdevapps.com](mailto:support@bdevapps.com).

## Showing browsers list for links/apps that are not in "Per App" list and "Per Domain" list

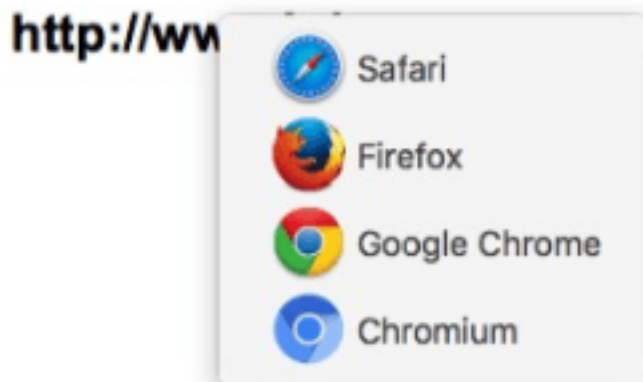

1. Set Browser ChooserX as Default web browser.
2. Open "Browser ChooserX".
3. Find the menu bar icon and click in it.

4. Select "Show browser list".

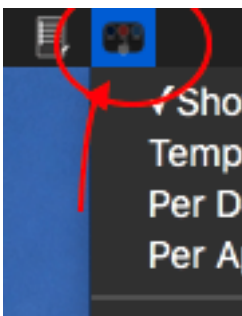

5. Now when you try to open a link outside a browser a list of your browsers will appear.
